I N T R O D U C T I O N.

TH E Society for the encouragement of Arts, Manufactures, and Commerce, having been established on the most disinterested principles, and actuated by the most liberal motives, the benefit of mankind in general, and of their country in particular; it may be deemed extremely satisfactory to its members, especially those who, from different avocations, have been prevented from contributing by their personal assistance, as well as by their subscriptions, to the more effectual execution of so beneficent a plan; to be enabled to take a retrospective view of their transactions, and examine, at their leisure, into the good effects produced by their laudable endeavours.

For this purpose, a committee has been particularly appointed, to examine the pro-

ceedings of the Society from its institution; who have, with their best care, extracted the several articles for which premiums or bounties have been given, and arranged them under the respective classes to which they belong; distinguishing them in different columns, the year when, and the person to whom, such premium or bounty has been given; if pecuniary, the sum; if honorary, of what kind.

It would have enlarged a work of this nature beyond its intended size, to have pointed out the publick benefits derived from each article; but as some of them have been happily productive of great national and commercial advantages, **THEY** are more particularly mentioned in the Observations annexed to each class.

N. B. The rewards given by the Society are distinguished under the titles of **PREMIUMS** and **BOUNTIES**: the **FIRST** being such as are adjudged to candidates who claim under the terms of the annual advertisements published by the Society; the **LATTER** are such as are bestowed on merits that have not been previously called for by the Society, or that do not precisely come within the terms of their annual advertisements.

For brevity, the names of the places of abode of the several candidates are omitted, but may be seen and known at the Society's office; where it will be found that their rewards have been distributed all over Great-Britain, Europe, and America.

OBSERVATIONS

On the Effects of Rewards bestowed in the Class of Agriculture.

THE national benefits to be derived from improvements in Agriculture, made it an early object of the attention of the Society: it engaged them to extend their premiums and bounties largely to candidates in this class; and the several articles for which they have been given point out, in a great measure, their utility. The raising, planting, and preserving Trees proper for Timber, particularly Oak, in a commercial and maritime kingdom, where it is so much in demand, have been greatly promoted by the premiums they have offered; and the effects may in some degree be observed from the quantities for which the successful candidates have obtained them, though no account has been taken of the quantities raised or planted by the unsuccessful ones.

The culture of Hemp, an essential article to our shipping, has also been carefully attended to, and the premiums for this article extended to our colonies, from whence it would, in all probability, have been obtained in great plenty, were it not for the unhappy divisions that have since arisen.

Improvements in the culture of most kinds of Corn and Grass-Seeds have been diligently searched for, and in many articles happily found. Very considerable improvements in several of the common utensils of Husbandry, and others entirely of a new construction, have not only been obtained, but their utility experimentally proved by the Society; and many of these, in large, and the models of others, have been placed in their repository for the inspection and use of the publick.

Madder, an essential article in dying and callico-printing, which had been raised to an extravagant price by the foreign growers and importers, on a supposition that it could not be brought to any degree of perfection in this kingdom, has been very successfully obtained by the considerable premiums given for that purpose; and the English Madder, produced in consequence, was found as good, at least, if not better, than any imported.

As the culture of this article is attended with great expence, the Society was apprehensive that the payment of tithes in kind, might counteract the good effects otherwise to be expected from their premiums; some of their members who had seats in parliament applied to the legislature, and obtained an act, by which the payment of tithes for Madder was fixed at five shillings $\frac{1}{2}$ acre.

By the removal of this obstacle, and a continuation of rewards from the Society, the effect principally required has been fully obtained: Foreign Madder is reduced to a reasonable price, and likely to continue so, as the growers in Holland, and other countries from whence it is imported, are thoroughly convinced that we can supply ourselves with any quantity, and of the best kind, whenever, by advanced prices, the profits are found sufficient to engage the attention of our husbandmen. Our dyers and callico-printers have found great benefit, and the nation has saved many thousand pounds by the reduction of the price of this article.

A SUMMARY ABSTRACT

Of the Rewards given in the Class of Chemistry.

For Improvements in DYING and TANNING, TRAIN OIL, &c.
 For making CRUCIBLES, RETORTS, and importing BLACK LEAD for making
 MELTING POTS
 For SAL AMMONIAC, VERDIGRIS, and a SUBSTITUTE for BORAX
 For making ENAMEL, GLASS for ACHROMATICK TELESCOPES, and VARNISH
 For discovering COBALT, making ZAFFRE and SMALT, improving BRITISH IRON,
 TINNING with PURE TIN, WHITE COPPER, and LEAF METAL and BRONZE
 For cleansing CARVINGS in IVORY, improving the DIGESTOR, and securing the
 Health of WATER-GILDERS

OBSE R V A T I O N S

On the Effects of Rewards bestowed in the Class of Chemistry, Dying, and Mineralogy.

C O B A L T.

THE discovery in these kingdoms of the mineral substance called Cobalt, from which Zaffre and Smalt are prepared, was a very early object of the attention of this Society; and though their expectations, that a mine of it would have been worked, have not been gratified; yet by the several premiums offered and bestowed in order to promote that design, this good effect has followed, that a mine has been discovered though not worked, and that the miners, assayers, and chemists of this country are become much better acquainted with the nature of Cobalt, and the manner of preparing Zaffre and Smalt from it, than they were before. And as it is well known, that there are other mines, or, at least, some veins of this substance in Cornwall, Devonshire, and also in Scotland, and probably in other parts of the kingdom, it promises, in time, to become a matter of very great and profitable importance. For when it is considered that all the Cobalt used in our manufactories, and nearly all the Zaffre and Smalt consumed here, are imported at a large expence from abroad; the finding the original material, and making the preparations from it, will open a new business, and establish a manufacture, which has hitherto taken place here only on a small scale. Great quantities of Smalt imported, as has been observed, from abroad, are used under the name of Powder Blue, in washing linen; and very large quantities of Zaffre are annually sent to China, for the use of their manufacturers; much of the Zaffre brought to England is mixed with matters that debase its quality, and injure its colours;

and as the manner of preparing it from Cobalt is now well known in England, and as all mixture of foreign matter may be easily avoided, there is not a doubt, that if a mine of Cobalt should be properly worked in this kingdom, that material, so useful in our manufactures, and of so much consequence as an article of commerce, may be prepared here in a more accurate manner than has hitherto been practised abroad.

C R U C I B L E S.

As all Crucibles used by chemists, assayers, and melters of metals, were imported from abroad, the Society thought the discovery of proper materials for manufacturing them in this country, was an object well worthy of their consideration; and having bestowed some few rewards for that purpose, were pleased to find that a manufactory for making these vessels was established at Chelsea; where they are not only made for home consumption, but a considerable quantity have been exported. We must here observe, that those kinds of Crucibles or Melting Pots, called Black Lead, or Blue Pots, which are the only sorts made use of in Cornwall for assaying Tin Ores, were not to be obtained from any part of Europe, except a small place called Hafner's Zal (i. e. Potters Place) or Passou near Rehgenburg in Germany, where the only manufactures of this kind were carried on. This inconvenience laid the tin smelters in Cornwall very frequently under great difficulties, not only with regard to the advanced price in time of war, but often from a total want of an importation of the pots, a stop

a stop has been put to many of their works; but the Society have the satisfaction to find by certificates from some of the most respectable assay-masters in Cornwall, that in consequence of their attention and their Rewards, a manufacture of Pots, fully answering all their purposes, is now established at Chelsea; and many of the most capital refiners, and the workmen at the mint, using no other than what are made there, the most sanguine wish the Society had on this important object has been fully gratified.

TANNING with OAK SAWDUST.

The reward given by the Society to the person who discovered the use of Oak Sawdust in Tanning Leather, (of which full trial was made, and the efficacy thereof ascertained, as appears by the samples in the society's repository) opened new lights in that very extensive and useful manufacture, and will probably, in time, be practised to great advantage, when the legislature shall think proper to repeal that law which confines the tanner to the use of very few materials in his business.

DYING or COLOURING LEATHER.

The introduction of the eastern manner of dying Red and Yellow Leather has been attended with great advantages to the publick; a manufacture of considerable extent being now established in England, where these kinds of leather are prepared and dyed in a manner superior to what are imported from Lisbon or elsewhere, and of which large quantities have been exported to foreign markets.

DYING TURKEY RED.

The art of dying this colour on cotton, was formerly unknown in these kingdoms; but by the attention of manufacturers to the premiums offered for the discovery of it, it can now be done here of as beautiful and as lasting a colour as that imported from the Levant.

SAL AMMONIAC.

The making of this Salt in England, has succeeded so far, that very large works of it are now carried on; to the attainment of which, there is good reason to believe, the premiums offered, and the bounties given, by the Society, have in a great measure contributed. And if it be considered, that great quantities of this material are consumed in various operations, the whole of which was formerly imported, its attainment will be found to be an object of great consequence.

VARNISH.

The beauty and durability of the Varnish invented and used by Mons. Martin, of Paris, and for which large sums of money were annually sent out of these kingdoms, induced the Society to offer premiums for discovering the method of making the like here; and the high perfection to which our workmen are now arrived in that art, evinces that those premiums have had a happy effect.

For establishing Manufactures of POT-ASH and PEARL-ASH	894	15	6	1	
TOTAL	2785	13	8	12	

OBSERVATIONS

On the Effects of Rewards bestowed in the Class of Colonies and Trade.

THE Society, influenced by the tenor and spirit of sundry acts of parliament, subsisting for more than a century past, and being of opinion, that to encourage in the British Colonies the culture and produce of such commodities as we must otherwise import from foreign nations, would be more advantageous to the navigation and commerce of this kingdom, than if the like things could be raised within the island of Great-Britain, have liberally extended their premiums and bounties for sundry articles suited to the climates and circumstances of the North-American provinces: among which, the Manufactures of Pot-Ash and Pearl-Ash happily succeeded to their wishes, and the importation of these articles from North-America was already become an established and important branch of Trade.

The planting of Mulberry Trees, the propagation of Silk Worms, and the produce of Silk, were so far advanced, that, in consequence of the rewards given by the Society, eleven thousand five hundred and seventy-five pounds of Raw Silk were imported from those provinces.

The planting of Vines, and making Wine from Grapes; the improvement of manufacturing Indigo; and the obtaining Oil from Vegetables the produce of those colonies, have been objects of the Society's attention: and the success of all these undertakings bore a most favourable aspect when their further correspondence with North-America was interrupted by the present unhappy disputes.

A S U M M A R Y A B S T R A C T

Of the Rewards given in the Class of Manufactures.

For Improvements in the Manufacture of LEATHER, in BLEACHING, in making
CATGUT, in making ARTIFICIAL FLOWERS, in weaving FISHING NETS,
TAPESTRY, and WINDOW BLINDS
For making CARPETS, CHIP HATS, DRUGGETS, LACE, MILLED CAPS, and
various Kinds of PAPER
For QUILTING in the LOOM, and SPINNING several Sorts of YARN
For improving several MACHINES used in MANUFACTURES, viz. the COMB POT,
CARDS for WOOL and COTTON, STOCKING FRAME LOOM, MACHINES for
WINDING and DOUBLING, and SPINNING WHEELS

On the Effects of Rewards bestowed in the Class of Manufactures.

THE great and good effects of rewards bestowed in this class, afford the clearest proofs of the advantages which this nation has derived from the benevolent labours of the Society.

Genius, though not confined to any particular rank, often sleeps with the affluent, while necessity compels the indigent to exert it.

That noble enthusiasm, which always exists in the authors and inventors of agreeable and useful arts, is easily excited by well timed, though moderate, rewards: and, therefore, that there should be a bank of generosity, to which such genius may, without difficulty, apply, and from whom, without chicane, it may expect the reward of merit, as well as a mark of honour, is here undeniably proved to be the surest means of employing and applying such genius to national benefit.

It is not our intention to insinuate, that the rewards given by the Society have been, in any degree, equal to the national advantages obtained by them: we mean only to shew what great benefits have been, and may be, derived from small means well administered.

CARPETS

Manufactured in the TURKISH Manner.

This was an early object of attention in the Society; by their rewards it is now established in different parts of the kingdom, and brought to a degree of elegance and beauty which the Turkey Carpets never attained.

CAMEOS and INTAGLIOS in artificial Gems.

In consequence of premiums offered in the class of polite arts, for introducing and improving the art of imitating ancient sculptured Gems, Cameo and Intaglio, by exact impressions, in various coloured pastes, a Manufacture of this kind is established in England, and succeeds so well, that all sorts of engraved or embossed Gems, ancient or modern, can be exactly copied, and at so small an expence that, whatever there may be of taste and elegance in these epitomized compositions of the ancients, they are now no longer confined to the cabinets of the curious, but, for the benefit of young artists, and the gratification of all others, are diffused among the publick.

CHIPPINGS

Being of very general and popular use among the female part of the nation, are, consequently, while they continue to be imported from abroad, an important article in the national outgoings; but now they are brought to such perfection in the manufactories set up in Devonshire and other parts, as to give hopes that the importation will soon cease.

COMB POT.

It is of the greatest importance, that every branch of the woollen manufactory, esteemed the Staple Trade of the kingdom, should be carried on at the smallest expence.

The Combers of Wool generally heat their Combs by Charcoal, which, in parts where wood is scarce, is immoderately dear. The inventor of a Comb Pot, whereby the same operation was effectually performed by Pit-Coal, was judged to be well worthy of being distinguished and rewarded by a bounty.

DRUGGETS.

The Society having been informed, by merchants, that a particular species of foreign Druggets were in great request in the southern markets of Europe, established and continued annual premiums, till our manufacturers made the like sort in perfection equal to the foreign.

LEATHER.

Hides being a native commodity, the converting them into Leather was attended to by the Society as another Staple Manufacture. In consequence of their rewards, Losh, or Buff-Leather, has been made in England, equal to the best imported.

Also, a very extensive manufacture of Red-Leather, in imitation of Turkey or Lisbon, has been established under the influence of their rewards: great improvements having been made in the process laid before the Society by the foreigner from whom they purchased the secret (see the article in class Chemistry). The skins are now prepared and dyed in so excellent a manner, that they are not only preferred to the foreign by the consumers of that commodity at home, but have been exported in considerable quantities.

SPINNING, WEAVING, &c.

Great and repeated Improvements have been produced to the Society, in Spinning-Wheels, and Machines for winding, doubling, and twisting Linen, Cotton, and Worsted Yarn; and, also, a very extraordinary improvement in the Loom itself: — The general intention in all these Machines, being to shorten labour and to save expence; the Machines themselves, or perfect models of them, are preserved in the Society's repository.

PAPER.

- 1. Of Silk Rags.
- 2. For Copper-Plate Prints.
- 3. Embossed.
- 4. Marbled.

Under the encouragement of the Society, all these have been established: the first, from the difficulty of

of discharging the colours from dyed filk, has not been yet made perfectly white; but is manufactured in small quantities of different shades of brown or other colours, and is the best paper for drawing on with chalks, or crayons: the second was necessarily imported, at a considerable expence, from France, till its manufacture at home was promoted by the Society: the third and fourth sorts, were also foreign manufactures; and the last, being of very general use, was imported in great quantities, and to a great amount in value; but it is now made here to perfection, at several manufactories, and is become an article of exportation.

QUILTING in the LOOM.

When the proposition was first made in the Society, of offering a premium to encourage the Making in the Loom, an imitation of that species of Needle-

work, long known by the name of Marseilles Quilting, it was almost rejected as visionary and impossible; but the laudable spirit of enterprize, which has always distinguished this Society, determined them to publish the premium, not despising the intimations of an enthusiastick mechanick: it had the desired and wonderful effect: this success animated them to continue their premiums, in hopes of further improvement, in which they were not disappointed. The manufacture is now so thoroughly established, and so extensive, being wrought in all the different materials of Linen, Woollen, Cotton, and Silk, that there are few persons of any rank, condition, or sex, in the kingdom, (and we may add, within the extent of British commerce, so greatly is it exported) who do not use it in some part of their clothing; so that we may safely say, if the whole fund and revenue of the Society had been given to obtain this one article of trade, the national gain in return should be considered as very cheaply purchased.

A SUMMARY ABSTRACT Of the Rewards given in the Class of Mechanicks.

	Pecuniary		Honorary	
	£.	s. d.	Medals	
			Gold	Silv.
For Improvements in different Kinds of CARRIAGES, for a COACH BRACE, and for a Variety of MACHINES and MODELS	795	10 —	1	3
For an AUGER, GAUGING ROD, INDEX BALLANCE, QUADRANT, LOCKS, HINGES, WIMBLE, and a JACK for Ship-Builders	157	10 —	1	2
For MILLS, viz. HAND-MILLS, SAW-MILLS, TIDE-MILLS, &c. PUMPS, TIME PIECE, and SHIPS BLOCKS	765	15 —	2	
For a MODEL of an ARCH, CRANES, ENGINE for polishing PLATE GLASS, GUN HARPOONS, PLOUGHS, PULLEYS, SILK REEL, SPRINGS, TABLETS, SPINNING WHEELS, UMBRELLA, COMPASS, DIVING BELL, FLOATING LIGHT, IRONS for WIRE DRAWING, and PORTABLE OVEN	565	19 6	4	5
TOTAL	2284	14 6	6	10

OBSERVATIONS

On the Effects of Rewards bestowed in the Class of Mechanics.

ONE great and general effect of the rewards given in this class, has been the removing, in many instances, old vulgar prejudices against all new inventions: the most ignorant are generally the most obstinately attached to the ways of working wherein they have been brought up. The husbandmen of Surry, Berkshire, and sundry other parts, can scarcely be prevailed upon, at this day, to use the Norfolk and Suffolk Plough in similar soils, though it operates at half the expence of their own. But the many valuable Machines and Models, the Mechanical Inventions or Improvements produced in twenty-four years past (and every year increasing) being preserved in the Society's repository, for the inspection and information of the publick, and the several convincing experiments made under the auspices of the Society, have begun, by means of its members and other gentlemen, to excite and diffuse a spirit of improvement, particularly in instruments of Husbandry, through all parts of the kingdom.

S A W - M I L L S.

Intimidated by a groundless suggestion of a pretended prohibitory act of parliament, this country submitted, for many years, to have Timber cut into

Boards by the Saw-Mills of Holland and other Foreign Countries, till the publick spirit and the rewards of the Society interposing, the prejudice was overcome; and to the great credit and emolument, both of the publick, and of the particular undertakers, Saw-Mills are now firmly established in England.

W H A L E - F I S H E R Y.

The invention of the method of Striking Whales by the Gun-Harpoon, now confirmed by experience, will, most probably, make the profits of that Fishery double to what they were before.

PLAINING CAST-IRON—POLISHING P L A T E - G L A S S.

The Machine for Plaining Cast-Iron Plates: and also the Engine or Mill for Polishing Plate-Glass, by horse, wind, or water, are inventions of very great merit. But it suits not the intended brevity of these observations, to describe the several excellent Machines, which, being already named in the tables of this Register, will be best understood by viewing them in the Repository.

On the Effects of Rewards bestowed in the Class of Polite Arts.

HOWEVER considerable the sums that have been expended by the Society in the advancement of the Polite Arts, the remarkable success with which they have been attended may now be contemplated with particular satisfaction. It soon became evident, from the number of candidates for premiums in the several branches of this class, that genius wanted only encouragement, to shine with equal lustre in this as in other countries; and it appears from the foregoing list of those who have been successful, that the rewards so liberally distributed by the Society, have been the early means of bringing forward a number of ingenious artists, and inciting individuals to such an exertion of their talents, as to become an honour to the Society, and to their country.

The reputation acquired by several candidates, in consequence of their performances remaining for some time under the inspection and examination of the members of the Society, before and after adjudication, occasioned the artists in general to apply for an exhibition of their works, in the Society's great room, which was accordingly complied with, and repeated annually for a few years at the charge of the Society.

From hence have arisen the annual exhibitions of the rival artists, who had formed themselves into separate bodies. The emulation by which each was excited, helped greatly to the rapid improvement of the arts; and to attract the general attention of the public towards their performances. And from hence, also, the royal patronage and protection they have since had the honour of obtaining, and under which

they so eminently and deservedly flourish, may in some measure be derived.

The Society having been thus fortunately successful in rearing the infant arts in this kingdom, to such maturity as qualified them for royal favour, confine their premiums chiefly to the encouragement of young beginners, who may intend to be future professors; and to others in a higher sphere of life, who may hereafter become the patrons or patronesses of the finer arts.

Abstracted from the honour derived to any nation, from its excellence in the Polite Arts, the advantages, in point of profit, resulting from thence are not unworthy of some consideration. The money that otherwise might probably be sent to purchase the works of foreign artists in sculpture, painting, or engraving, may now be as advantageously disposed of in such purchases at home; for however inferior to the great master-pieces of art produced, in former times, from Greece and Italy, it will not be too presumptuous, perhaps, to say, the works of our artists may now be justly placed in competition with the best productions of the moderns.

The encouragement also that has been given by the Society, to invention or improvement, even in the lower branches of the Polite Arts, such as Drawings of Patterns for Silk-Weavers and Callico-Printers, has been attended with evident benefit to these manufactures, which now may fairly vie in beauty with those of any other country.

Observations on the Miscellaneous Articles.

BESIDES the premiums and bounties distributed by the Society on account of the several articles ranged under the foregoing classes, they have occasionally thought proper to extend their encouragement, in behalf of the publick, to some particular objects, not altogether, perhaps, so strictly within the ordinary prescribed limits of their original province; among them, that which may be accounted the chief deviation from their general plan, was the very large sum given for an endeavour to establish an effectual method of procuring a constant supply of Fish, from several of our distant coasts to the capital, by land-carriage; in which they had the concurrence of the legislature, who not only granted a sum of two thousand pounds for the same purpose, but also passed an act, by which the legal obstructions to the execution then subsisting were entirely removed.

On this article the Society have expended so considerable a sum as three thousand five hundred pounds, which, though still of great benefit to the publick, must have been attended with much greater if the plan had been executed with the same liberal and disinterested spirit with which the money had been advanced.

The approbation of particular services rendered to the Society, has likewise been occasionally testified by the grateful acknowledgement of an honorary gold medal; and in some signal instances, where no return in their power could be deemed adequate to the obligation conferred, the Society have endeavoured to stamp a yet more specifick value, by the addition of some express testimonial engraved accordingly on the medal.

Of the Medals given by the Society from the first Institution to the
Year 1776 inclusive.
